---

Message:

We received a rejection letter to the above referenced application. The reason for rejection was because "NTIA objected to this experimental STA because harmful interference was anticipated to several radars operating in 2.73-2.955 GHz."

We would like to update our application so that we only operate between 3.0 and 3.1 GHz. That way we would not interfere with the referenced radar systems. Do we need to submit a brand new application (starting from scratch) or is there an easy way to amend the existing application?
