Exhibit 'A' - Experimental License Request; SEA, Inc.

This request is for an experimental license to operate an Inmarsat 'C' earth station in a land application.

SEA is the leading US manufacturer of HF SSB and marine VHF radios. SEA designs, develops and manufactures radio communications equipment for marine and land mobile communications.

SEA is now offering its SEASAT model, Standard 'C' transceiver through SEA's international distribution network of marine radio communications dealers. We will be testing and demonstrating this Standard 'C' transceiver at SEA's headquarters and at various trade shows throughout the United States.

This request for an experimental license will allow Inmarsat to "commission" SEA's transceiver and provide FCC authorization for operation of the equipment.
