Message:

The purpose of the experiment is to evaluate the use of the 600 meter band from 465 KHZ to 478 KHZ mode CW with peak EIRP of 20 watts for amateur radio as part of the WD2XSH network in current operation. This 600 meter band has already been approved for operation in other countries and the 5 year proposed experiment should be adequate to approve it's use for amateur radio in the United States.
