Explanation for Use

SITECH Louisiana, LLC manages a single location in Baton Rouge, Louisiana where we test GPS equipment. SITECH Louisiana is a company that provides cutting edge technology for construction companies throughout the state of Louisiana. The proposed program to bring GPS signal availability into our testing area would provide a requirement to perform high-precision GPS accuracy evaluations. This will provide necessary information for our internal testing and evaluation. GPS signal availability will enable a safe testing environment, as well as a controlled environment for GPS testing.
