Special Conditions:

- (1) Licensee should be aware that other stations may be licensed on these frequencies and if any interference occurs, the licensee of this authorization will be subject to immediate shut down.
- (2) In lieu of frequency tolerance, the occupied bandwidth of the emission shall not extend beyond the band limits set forth above.
- (3) NTIA approves as long as the power levels do not exceed:
 - 77.8 dBW/4 kHz EIRP for gateway equipment
 - 87.8 dBW/4 kHz EIRP for PCMCIA equipment

Special Conditions:

(4) NTIA would like to comment for any future applications the following:

The current MSV license does not permit reverse band operations where mobile terminals transmit in the downlink band and base stations transmit in the uplink band. NTIA has developed an out-of-channel emission level of -90.3 dBW/4 kHz EIRP for mobile terminals operating in the 1525-1559 MHz band to protect satellite mobile earth terminals used by the Federal government.
