

There are two Army contracts that require radiosonde flights to be conducted from our facility. One contract is the AN/TMQ-41A, Meteorological Measuring Set (MMS), contract number DAAB07-99-D-D770. The MMS production contract is through the U.S. Army Communications and Electronics Command, Fort Monmouth, NJ. The MMS is an upper air meteorological system that supports the field artillery and must launch radiosondes to collect meteorological data.

The other contract is the AN/TMQ-52 Meteorological Measuring Set - Profiler (MMS-P), contract number DAAB07-00-C-J613. The MMS-P is development contract is through the U.S. Army Communications and Electronics Command, Fort Monmouth, NJ. The MMS-P is the next generation upper air meteorological system for the U.S. military that uses radiosonde data as an important input to the system.
