SpaceData will use a single transmitter, located at 38-00-00N, 122-27-00W and transmitting at frequencies in the 14887.8 to 15118.9 MHz-band. The transmitter will operate with a mean EIRP of 60.2 and will employ a circularly-polarized directional (parabolic) antenna. The frequency tolerance of the transmitter will be maintained within one part in 10^{-9} in the short term. The testing facility will receive data from NASA's White Sands Facility via a TDRSS satellite at a frequency of 13747.9 to 13802.0 Mhz. The receiver will operate with a mean EIRP of 26.3, using bandwidth of 1.4MHz.

The antenna will be mounted on a platform and extend no more than 10 feet above the ground. The top of the antenna is shielded on all sides by buildings that are at least two stories tall so there is no possibility of any adverse impact on air navigation. In addition, if there are terrestrial users in the proposed frequencies in the area around the earth station, we would coordinate use with any affected operators. In the unlikely event of a report of interference from any existing licensee, the test will be immediately stopped. If the Commission receives any reports of interference, the complaint should be referred to Wil Zarecor at 770-489-3221.
