

Reason for experimental licensing: Product development and manufacturing of low power transmitters and WLAN equipment for both domestic and international sales.

To include evaluation of product performance and determination of customer acceptability, all such operation shall take place at the manufacturer's facilities during development, design, and pre-production phases of the product. Development of radio technique, equipment, operational data or engineering data related to an existing radio service. Testing of equipment in connection with production or regulatory approval of such equipment.

All development and testing will be conducted on the manufacturer's premises. That work will be done inside of the building. The equipment will be only that aimed at compliance with existing radio service.
