

The purpose of this license is to validate a new application and service, using TV White Space, to extend an existing cable plant (DOCSIS) wirelessly, to expand the reach of the Cable business to customers who cannot currently be economically served, and to determine if this technology can provide a viable return path for these users for various 2 way services and applications.

The base station antenna will be cited below the top of an existing tower.

The transmitter, while not currently FCC certified will only be accessing tv channels identified as vacant (White Space) by an FCC authorized TVWS database
