Subject: Request for Info - STA File #1059-EX-ST-2013

Message:

Hi, Doug:

Regarding our call this morning, I spoke with Christian Voelker about the equipment again. He reviewed FCC Rule 15.247, and agreed that the transmission is well within the specifications set out in that part. Currently they are operating at 905 Mhz in Calgary, and without incident.

Also, as you suspected, the frequency range for the equipment at both sites is 902-928.

Many thanks for your help with this.

Regards,
John Lawler
