

7. Exhibit No. 1

The federal contract is Michigan W-127-R, with the Fish and Wildlife Service, Office of Federal Aid. The purpose of the research program, including the telemetering of wildlife, is to improve the management of wildlife within the state. This occurs through the detailed study of animal movements, behaviors and habitat uses. This type of information is used to answer a wide range of management questions.

8. Exhibit No. 2

- (a) Review information submitted in exhibit no. 1.
- (b) The only way that the research projects can be successfully accomplished is through the use of radio callers and similar radio communications devices which enable the animals to live in their natural environment and behaving in a natural manner so that the results of the research can be as accurate as possible.
- (c) The present communications facility that we have incorporates the use of telemetry for wildlife tracking, etc. and we would like to continue using that equipment by receiving a new license authorization for this equipment.
