

Stevens Institute of Technology is an ABET accredited graduate engineering research program.

All experiments will be conducted on university owned property.

Stevens monitors and effectively manages a wide range of research projects.

Our research group has many years of theoretical and practical working knowledge in a wide area of electromagnetic based technologies for which spectrum management is required. Members of our team have expertise in both space and terrestrial communication systems as well as radars. We are capable of insuring that all FCC requirements are met before, during, and after testing.
