

Request for Modification to License (Corrected Configuration)

December 13, 2019

- The modification request is solely to increase the maximum peak transmission power from 20W to 31.6 kW for the 2110-2200 MHz at the Jornada NM test site and 2100-2200 at the Apache City, CO test site, frequencies.
- These frequencies pertain to the establishment and performance evaluation of a UAV communications network with Configuration 2 (seen next slide). This slide has been revised to correctly represent the uplink and downlink frequencies from the ground station to UAV
- The purpose of the modification is to enable the use of up to a 4 x16 MMIMO directional antenna array, for a ground station to UAV link, with optional power amplification, for 5G applications.
- All other characteristics of the original application remain unchanged.

UAV Network: Configuration 2 (Revised)

Transmission
Frequencies (MHz)

UAV to UE

- 2620-2690

GS to UAV

- 2110-2200 (NM)
- 2100-2200 (CO)

UAV to GS

- 1920-2010
