Subject: Request for Info - File #0594-EX-PL-2013

---

Message:

FCC QUESTION.

The FCC cannot coordinate this application with NTIA until a ground station has been selected. Submission of the RAD, RAZ and RAP fields requires earth station location information. Submit the ground station location when it becomes available. If the location still hasn't been selected within the next 30 days, respond to this email with an estimate of when that information will be available.

SUREEY SATELLITE TECHNOLOGY RESPONSE:

No change since last submission, ref 21913.

Surrey Satellite Technology has not completed the down selection of an appropriate ground station, which will be used for TT&C (transmit and receive) and payload data download.

Surrey Satellite Technology estimate the selection process to be completed by 30th April 2014 at which time the RAD, RAZ and RAP information will be provided to the FCC.
