ODAR Section 1: Program Management and Mission Overview

Program/ Project Manager	Sara Spangelo
Mission Description	This mission is a technology demo for two-way communications satellites and data relay.
Foreign Government Involvement	None
Project Milestones	The project milestones for the Swarm satellite aligns with the launch of the vehicles into orbit, including a delivery of the spacecraft two months prior to launch.
Proposed Launch Date:	September 2, 2019
Proposed Launch Vehicles	Vega Number of Satellites: 12 Altitude: 500 km Inclination: 97.4 (SSO) Period: 95 min
Proposed Launch Sites	Guiana Space Centre, French Guiana

Launch Vehicle Operator:	Arianespace
Mission Duration:	The operational lifetime of the hardware for each satellite is designed to be up to 10 years following deployment from the launch vehicle. The orbital lifetime for the satellites in the nominal mission scenario is expected to be between 3.269 and 3.587 years, as described in Section 6.
Launch / Deployment Profile:	Launch The Swarm satellites will be injected directly into the target orbit outlined in the table above. Checkout For up to 1 month following deployment into orbit, the Swarm satellite will remain in checkout phase. During this phase, ground operators will verify correct operation of the satellite and its payloads, and prepare it for the operational phase. Operations The operational phase of the satellite begins following the successful deployment of the Swarm satellite from the launch vehicle and successful checkout. Post-mission Disposal Following the end of the operational phase, the satellites will remain on orbit in a non-transmitting mode while the orbit of the satellites passively decays until the satellites reenter the atmosphere and disintegrate. The satellites are nominally expected to reenter the atmosphere within 3.587 years following deployment from the launch vehicle, as detailed in Appendix B: Swarm Satellites Orbit Lifetime.
Selection of Orbit:	The selection of the chosen orbit was made due to available launch opportunities.
Potential Physical Interference with Other Orbiting Object:	As the satellites do not have any propulsion systems, their orbits will naturally decay following deployment from the launch vehicle. As detailed in Section 5, the probability of physical interference between the satellites and other space objects is sufficiently unlikely that the satellites comply with Requirement 4.5.

ODAR Section 4: Assessment of Spacecraft Intentional Breakups and Potential for Explosions

Potential causes for spacecraft breakup (there is only one plausible causes for breakup of the satellites):

- Energy released from onboard Lithium-ion battery from the unlikely event of overcharging or shorts

Summary of failure modes and effects analysis of all credible failure modes which may lead to an accidental explosion:

The battery aboard the satellite is an 11 Whr Lithium-Ion battery, which represents the only credible failure mode during which stored energy is released. The main failure modes associated with Lithium Ion batteries result from overcharging, over-discharging, internal shorts, and external shorts.

The battery onboard Swarm satellites complies with all controls / process requirements identified in JSC-20793 Section 5.4.3 to mitigate chance of any accidental venting / explosion caused by the above failure modes.

Detailed Plan for any designed spacecraft breakup, including explosions and intentional collisions:

There is no planned breakup of the satellites on-orbit.

List of components passivated at EOM:

At end of mission, all radio transmissions and beacons will be disabled. Spacecraft transmissions are only initiated by ground command and self terminate. All RF transmissions from the satellite can be disabled via command from the ground.

Rationale for all items required to be passivated that cannot be due to design:

N/A

Assessment of spacecraft compliance with Requirements 4.4-1 through 4.4-4:	
4.4-1, Limiting the risk to other space systems from accidental explosions during deployment and mission operations while in orbit about Earth or the Moon	COMPLIANT
4.4-2, Design for passivation after completion of mission operations while in orbit about Earth or the Moon	COMPLIANT
4.4-3, Limiting the long-term risk to other space systems from planned breakups: There are no planned breakups of any of the satellites.	COMPLIANT
4.4-4, Limiting the short-term risk to other space systems from planned breakups: There are no planned breakups of any of the satellites.	COMPLIANT

ODAR Section 5: Assessment of Spacecraft Potential for On-Orbit Collisions

Probability for Collision with Objects >10cm:

The probability of a collision of any of the satellites with an orbiting object larger than 10cm in diameter was sufficiently small that the simulation performed using DAS 2.1.2 software returned a probability value of 0.

Assessment of spacecraft compliance with Requirement 4.5-1 and 4.5-2:	
4.5-1, Probability of Collision with Large Objects:	COMPLIANT
4.5-2, Probability of Damage from Small Objects:	COMPLIANT

A DAS 2.1.2 log demonstrating the compliance to the above requirements is available in Appendix A – “DAS 2.1.2 Log”.

ODAR Section 6: Assessment of Spacecraft Post-mission Disposal Plans and Procedures

Description of Disposal Option Selected:

Following its deployment, the satellite’s orbit will naturally decay until it reenters the atmosphere. Table 1 describes the mission scenarios for which lifetime analysis of Swarm satellites was considered, and the effective area-to-mass ratio of the satellite in each scenario. The ratio was calculated using the external dimensions of the satellite and deployed arrays. The satellites will be deployed from the P-POD with a spring and will separate from one another with separation springs in the feet.

Drag area from deployed antennas (4 antennas, 521 mm long turnstile antennas) was neglected; as such, the effective area-to-mass calculated below is a conservative case.

Table 1 - Area-to-Mass Ratio of Swarm Satellites in Various Mission Scenarios

ODAR Section 9: Orbital Tracking Methodology

The satellite is a 1/4U CubeSat in size (11.3 cm x 11.3 cm x 2.6 cm). Further, the satellites have an onboard GPS receiver, and the GPS location of the satellites is transmitted on command from the ground. We will have the ability to silence all RF transmissions of the satellites by command from the ground. Our GPS data, and computed TLEs, will be provided to CSpOC and to satellite operators that wish to receive the live telemetry. The GPS device will provide telemetry throughout the hardware lifetime of the satellites, which exceeds the anticipated orbital lifetime of the satellites.

Additional information regarding orbital tracking for Swarm’s 1/4U satellites is included in Exhibit D: Trackability Analysis and Exhibit E: LeoLabs Report.
