Application for Extension of Special Temporary Authority**

Description of Application

By the associated application, T-Mobile License, LLC (“T-Mobile”) requests an extension of the above-referenced experimental authorization, granted by the Commission on November 26, 2018, until September 6, 2019. T-Mobile initially sought this authorization in order to assess the circumstances under which adherence to the requirements of Section 27.1310 and OET Bulletin No. 74 may not be necessary to protect broadcast viewers. Using the parameters contained in OET Bulletin No. 74, T-Mobile would not otherwise be permitted to use some of its licensed 600 MHz spectrum under Section 27.1310 of the rules to provide service to the public because of current broadcaster operations on station WUVC.

Station WUVC is scheduled to be repacked by the end of Phase 5 of the post-incentive auction repack plan. September 6 is the scheduled completion date for Phase 5. When Phase 5 of the repack is complete, T-Mobile will no longer need authorization for its operations that provide relief from OET Bulletin No. 74 and rule Section 27.1310, although if the deadline for Phase 5 is extended or WUVC is granted an extension of its repack deadline, T-Mobile reserves the right to request an additional extension of this authorization until the new deadline.
