

REQUEST FOR EXPEDITED TREATMENT

As discussed in the accompanying “Narrative Statement,” Tarana Wireless is designing and developing equipment that will operate in the 3650-3700 MHz band. It seeks to demonstrate and test key functionalities of prototype equipment designed to improve reliability and efficiency of wireless backhaul systems and approaches. Tarana Wireless also seeks to test and evaluate the coverage, capacity, and reliability of multiple backhaul link operations in on the same frequency channel

Tarana Wireless was recently asked by a leading communications company to conduct demonstrations and tests beginning on **June 15, 2015**, to benchmark the system as part of its vendor selection process.

Accordingly, Tarana Wireless respectfully requests expedited treatment of its application so that it may commence the demonstration as requested. It is unable to re-schedule the test, as the representatives attending the demonstration cannot readily participate at another time. In addition, Tarana Wireless seeks to provide actual test data at the meetings to be held during the weeks following that demonstration.

Tarana Wireless submits that expedited processing of its application is in the public interest, convenience, and necessity, as it will permit Tarana Wireless to advance both the communications technology and the application technology needed to meet the rapidly expanding communications needs of users.
