

File Number of application that was denied: 0233-EX-CN-2016

Call Sign associated with the project: WJ9XRN

Description of why initial application was denied:

After the initial filing of the Form 442, the FCC requested additional information regarding radar altitude of operation and POCs to contact in the event of interference. The information was given but never received by FCC because TSC inadvertently replied to an automatically generated email, which when replied to, did not go to an actual human being. This unfortunately resulted in the denial of the application, as FCC did not receive the requested information within the required timeline.

The requested information is included below to ensure adequate processing of this new application.

- Flight level:

0 ft – 10,000 ft AGL

- Name and telephone of person who will respond to terminate the system if interference occurs.

Main POC:

Joshua D. Gullett

256-503-4085

Alt POC:

Brandon Wolfson

256-990-8208
