Technovative Applications is under contract to build and deliver a ground based Radar on a mobile platform operating in the C-band spectrum. The Radar requires emplacement and is in a fixed location while operating. To complete this contract Technovative Applications needs to be able to transmit and test the Radar at its facility in Brea, CA. This Radar is a pulsed Radar capable of limiting its transmit power by controlling the current of the final stage amplifier and duty cycle. Power and ERP measurements provided are its peak power.
