Message:

Sorry about this, but there is one more change I would like to make. I would like to make the modulation scheme for my carrier signal FM. An amplitude modulation scheme would not be practical for VHF signals. Also, there is a possibility that I MIGHT not use any modulation at all. But just in case I do, FM would be better anyway. I could purchase a basic FM VHF receiver off the market for my purposes. I hope this won't be a problem. Thank you.
