Subject: Request for Info - File # 0542-EX-PL-2016

Message:

In the attached exhibit document, it describes the operational test to be static on a roof top and land mobile using a truck flatbed along the east coast of the U.S. Our understanding based on the test description is that there will be NO airborne testing. However, on page 6, under the MODMAN section it talks about a forward link (ground to air) and return link (air to ground). Can your company please clarify if there is airborne testing with this experimental license request or is it only for the two scenario describe above (roof top and land mobile truck flatbed).

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of October 03, 2016 may result in application dismissal pursuant to Section 5.67 and forfeiture of the filing fee pursuant to Section 1.1108.
