The Boeing Company is expecting to install and test the MSTAR radar within the next 30 days. The MSTAR radar will be a major component of the Department of Homeland Security's SBINet system to secure the nations borders.

Due to the importance of this program to Department of Homeland Security contract #HSBP1006D01353 and to ensure this STA is in place prior to installation and testing, The Boeing Company requests expedited processing of this filing.
