

Hi Daniel,

We have completed the local engineering coordination and, subject to deconfliction with other experimental users in the Band, we have concurred to the following frequencies under the following coordination assignments:

<u>Coordination Serial</u>	<u>Location</u>	<u>State</u>	<u>FRQ (MHz)</u>
NG T150359	Mesa	AZ	5115
NG T150360	Mesa	AZ	5135

Otherwise for your proposed operation in the frequency range 4400 to 4950 MHz, subject to operation above 4410 MHz to compensate for your Bandwidth, no FAA coordination/coordination number is required.

Thank you for providing the necessary data below.
