---

Message:

Recently attached to the application is a document titled "SCT Spectrum Agreement";

This is a letter from the Mexsat customer, Secretariat of Communications and Transport (SCT), stating they have the rights to the frequencies for the system test. They also expected and authorized Boeing to apply for the temporary license for both El Segundo and San Diego to perform the system test. The SCT's "right" to the spectrum statement is listed at the first paragraph of the attached letter with the temporary FCC license listed at the end.
