Technical Description: Ground Testing to Verify Aircraft Communication Systems performance after Depot Maintenance. Testing Aircraft on-board communication systems for compatibility and coupling mechanisms, internal electronics and wiring. Transmit time not expected to exceed 3 hours per test at longest. Specific frequencies are needed for the test and are paired with one another. Stop Buzzer will be present at all times of testing and able to terminate test if requested. Will mitigate risk by contacting local Air Traffic Control and Air Force Base Installation Spectrum Manager prior to operating if necessary.

Stop Buzzer: James L Taylor
Cell: (316)209-1576
Email: james.l.taylor2@boeing.com

Operation Start Date: 11/30/2014
Operation End Date: 11/30/2016
