

Per CFR 47, section 1.1307.b(1), Table 1, all applications for experimental operations with an ERP greater than 100 watts require evaluation for compliance with human exposure limits defined in section 1.1310, and if exceeded require submission of an Environmental Assessment as defined in section 1.1311.

The below calculations define the minimum safe working distance for both Occupational and General Public, which are based on the maximum permissible exposure limits of 5 mW/cm² and 1 mW/cm² respectively.

The antenna will be operated in a controlled area. Only authorized occupational workers will be allowed access to the area of operation. In addition the transmitter will be secured prior to conducting maintenance, and the area will be monitored during the operation to ensure that personnel are clear of any radiation hazard area.

Transmitter Peak Power (Watts):	12.5
Maximum Antenna Gain (dBi):	30
Duty Cycle (%):	1
Transmitter Power (dBm):	40.9691
EIRP (dBm):	70.9691
Non-dimensional Antenna Gain:	1000
Transmitter Avg Power (Watts):	0.125
EIRP Watts:	12500
Avg EIRP Watts:	125

Minimum Safe Distance

	Occupational	General Public
Meters:		
Feet:	0.446	0.9974
	1.4633	3.2721
