

The following information reflects the past and planned uses of Mode S for testing with the F-15 Saudi Arabia aircraft in Palmdale, CA.

Multiple complications have altered our testing schedule since our original request (0893-EX-ST-2014 & 0441-EX-ST-2014) and this version remains fluid with the understanding that all planned changes to this schedule will be forwarded to the local FAA representative for awareness.

A total of 2 transmissions of Mode S have occurred since our initial request for operation, with an estimate of 3 planned transmissions between now and the expiration of the request. All Mode S transmissions will be made in Roll Call mode, with the individual aircraft being pinged.
