Comments: On our application 5233-EX-PL-96, an agreement has been reached with Jerry Sanders (FAA), Wayne Morris (AFTRCC) and your office that we use 2 of our channels. We picked 123.1583 MHz off our FCC license KLH2 and 123.3333 MHz under KRU7, KOX3, KPS6 and KA98763.

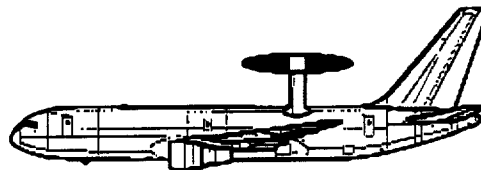

We appreciate all of your help with this assignment. If you have any questions, please give me a call.

123.1583

Comments: Here is a map of the Boeing field area. The antenna will be located on the North side of the 3-390 building, where all our current flight test antennas are already located. This antenna will not be over 20' above the building.

I also noticed a mistake on our application, the frequencies were listed as KHz, they should be MHz.

Thanks,

Gerry
