

Purpose of Experimental License

The Toro Company is seeking an experimental license for an indoor GPS re-radiating kit for exclusive use at the 8111 Lyndale Ave. South facility. This GPS re-radiating system will be used for software development off products that contain an embedded GPS receiver. This system allows GPS signals to be received at the developers work station so that messaging and control algorithms can be developed and tested in a lab environment.

A separate attachment is included detailing the specifications for the re-radiating kit, indoor antenna, cable and mounting kit purchased from GPS Networking in Pueblo, CO.
