ORS Squared

Craig Keif

5 June 2013

Craig

Last week you requested us to revise the coordinated frequencies for ORS Squared to be the same as Trailblazer. You have opted to licence your project as an experimental satellite. The coordinated frequencies are thus

Downlink	437,425 MHz
Uplink	145,950 MHz

The above frequencies have been coordinated with the understanding that you have agreed to the IARU terms of reference for the use of amateur service spectrum for experimental purpose.

Please advise us of the launch date and on which launch ORS Squared is manifested. Also please let us know which other satellites operating on amateur frequencies will be on the same launch. Although we have avoided coordinating frequencies which have already be coordinated for other known satellites on the same mission, it remains your responsibility to check for any possible conflict and advise us accordingly

Please also confirm the name and full contact details of the person who will control the operation of ORS Squared after launch.

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

We have noted the measures taken in controlling the satellite. We however draw your attention to the attached paper "controlling satellites" which sets out the requirements as per ITU regulations.

Best wishes for a successful project. Please keep us informed of progress
