

Thinkify is a privately held company, located in Morgan Hill, California.

Thinkify is a RFID company operating at 902-928 MHz with RFID readers (interrogators) capable of transmitting up to one watt of power at their ports. We design, build and test RFID readers, RFID tags, and the necessary software to run this equipment. In our lab we use multiple test equipment including spectrum analyzers and oscilloscopes to test and troubleshoot our RFID readers and tags. Our RFID equipment operates within the GEN 2 protocol which is a globally accepted standard.

Our main objectives is to build and test RFID readers and tags.

Our specialty is embedded RFID. -- Applications where we enable common objects, devices and whole environments to become aware of the world around them. This capability opens up new ways for people and objects to interact, allowing real-time visibility of the physical world from the virtual.
