May 1, 2007

To whom it may concern:

Trango Systems is a developer of high speed microwave point to point Ethernet communication equipment and is requesting special temporary authority for testing an 18 GHz product in development.

The product is ready to test now and we would like to expedite the process of obtaining the license so we may complete our test program outlined below and release the product:

- 1) Automatic transmit power control optimization
- 2) Failover latency optimization (protected configuration)
- 3) IP throughput optimization
- 4) T1/E1 latency and jitter optimization
- 5) Equalizer optimization
- 6) Ethernet frame latency and jitter optimization
- 7) Receiver AGC optimization

This testing is estimated to take only 6 weeks total to complete.

Thanks for your consideration in this matter. Please direct any questions to me.
