

Exhibit 1
Item 8

Triton is a leading manufacturer of millimeter wave digital transmission equipment intended for data and telephony providers. See www.triton-network.com. Triton seeks permanent authorization of parameters previously granted under Special Temporary Authority. See call sign WA9xGX. Triton will test and operate fixed microwave equipment in the 25.51-26.86 GHz and 38.06 - 38.480 GHz frequency bands in the Orlando Basic Trading Area ("BTA"), a geographic area method of licensing used in the Local Multipoint Distribution Service ("LMDS"). The wireless microwave transmission equipment used in the research is *intended for export to Japan*. Triton also intends to perform one or more on-site demonstrations of its equipment and associated technology.

The transmission equipment to be used is experimental and will be manufactured by Triton. Triton may also use other "off-the-shelf" equipment, antennas, cabling, etc.
