

DESCRIPTION OF APPLICATION AND PROGRAM OF RESEARCH

By the attached application, Turner Broadcasting System, Inc. ("Turner") seeks further authority to conduct experimental operations under the existing call sign WE2XKF (the "Station"). The authorization for the Station expires on November 1, 2009.

Turner produces news and entertainment programming through brands such as CNN, Cartoon Network, TNT and Turner Classic Movies. The Station permits Turner to evaluate the feasibility of the delivery of this programming through existing and emerging mobile wireless platforms. Turner has used the current authorization -- which superseded a previous experimental authorization by adding the authority to operate in the band 1900 MHz -- to conduct that evaluation. However, further research is required in order for Turner to more completely evaluate how it may deliver programming using mobile wireless platforms. Accordingly, Turner requires renewal of the authorization -- under the precise terms and conditions it was previously granted -- to continue this research. Turner has received no complaints of harmful interference from others during its continued evaluation. Nevertheless, Turner understands that experimental authorizations permit operation on a non-interference basis only and it will immediately terminate its operations under the experimental authorization if there are reports of harmful interference.
