

New Experimental License Application

This application is fee exempt.

The application is filed by a state university for the purpose of prototype development as part of federally funded research (National Science Foundation).

The research supports the development of new a multi-antenna wireless transceiver architecture at 28GHz (27.5GHz-28.5GHz). It is partly funded by the National Science Foundation. The PI on the research is Prof. Akbar Sayeed of the University of Wisconsin.

(We accidentally also uploaded a fee exempt statement for another existing experimental license WG2XXJ at 10GHz. Please ignore that statement – Akbar Sayeed)
