Application for Experimental License

Form 442, Item 7, Narrative Statement Describing Experiment/Usage

- a. The complete program of research and experimentation proposed including description of equipment and theory of operation.**

The purpose of this license application is to license a Cellular Base Station transmitter that will exist in our facility (internally or at customer site for demonstration purposes). This equipment is commercially available. We have taken steps to limit its coverage to within a few feet in a closed laboratory within our facility. The equipment will function solely as test instrumentation.

- b. The specific objectives sought to be accomplished.**

The primary intentions of the effort are to provide end-to-end diagnostic capability along with demonstration capability.

- c. How the program of experimentation has a reasonable promise of contribution to the development, extension, expansion or utilization of the radio art, or is along line not already investigated.**

We expect to add value for our customers by providing analysis of system operation in an end-to-end manner. The RF link is a vital element in any equipment analysis and needs to be included during analysis, test, or product demonstrations.
