

DARPA is participating in the U.S. Army Network Integration Exercises (NIE). NIE is a US Army integration exercise that is run out of Ft Bliss TX and uses the White Sands NM missile range (north of Ft Bliss) for the exercises. DARPA is using Vanu, Inc. commercial cellular equipment as the communication base station equipment for the exercises.

DARPA has asked Vanu to apply for an FCC experimental license. It is Vanu's expectation that since DARPA is the applicant, the fee will be waived.

Please correct me if this is an incorrect assumption.

Thank you.

Jim Jackson
