Subject: Request for Info - File # 1305-EX-ST-2021

---

Message:

1. The city/state is Ashland, VA. The application form has been amended to reflect this as well.
2. VMSC will work offline with its SAS administrator to ensure that prior to initial testing, and throughout the testing period, only clear spectrum will be used, and that no interference will arise to other possible users of this band, including incumbent and GAA users. This is accomplished by providing the SAS administrator all the CBSD system parameters normally used during CBSD registration (but offline), then SAS runs an interference analysis with the input data, just as if the CBSD were connected to a SAS. The offline interference analysis will be run periodically, prior and throughout the testing period.
3. There will be no operations in 3700-3800 MHz. This application seeks experimental special temporary authority for only the CBRS frequencies at 3550-3700 MHz.
