---

Message:

The on-axis EIRP density of our range test antenna is nominally 0 dBW/4 kHz. As the antenna points in a Northwesterly direction away from the GSO, the off-axis EIRP density in the direction of the GSO will be considerably lower. For example, the EIRP density in the longitudes along the GSO between 101 and 107.3 degrees should be less than -40 dBW/4 kHz.
