

DESCRIPTION OF USE

A typical application would be where the customer has an existing license and wants to upgrade his equipment. Vislink d/b/a Microwave Radio Corporation would then go out and demonstrate to purchase for 30 or 60 days the equipment to the customer on his license not exceeding the EIRP or bandwidth on the license. Any technical amendments required would be made.

A second aspect is where the customer does not have a license. We then have to go through the proper coordination process and demonstrate the link as above.

A third scenario would be at events and shows. The event or show coordinator would assign a frequency and RF Output power for our use.

We are requesting the maximum ERP in each band because we have no idea of what we will be required to demonstrate and what future developments will bring.
