

MEMORANDUM TO F.C.C.

07-20-2008

FROM: JAMES E. WHEDBEE

RE: Application #0343-EX-PL-2008

SUBJECT: Transmitter Make/Model Data...

Dear Sir/Ma'am:

All transmitter units (three proposed) shall be manufactured by Icom and have manufacturing dates from the 1980's to today. However, in the EHF frequency range, the Icom T-90A transmitter is to be used in conjunction with a series of passive (diode) multipliers to reach the 270-450 GHz range (note the multiples of 450 MHz in the frequency as this was not accidental). It is intended to use a variety of such Icom transmitters to determine if a given antenna works differently between different transmitters (which might suggest a design flaw), as well as to test antenna propagation between two or three field units once a particular design is reasonably well-designed and perfected. Accordingly, the "Model" information requested in the application merely states "Any Model," and this was intentional rather than being occasioned by neglect or oversight.

Respectfully submitted:

/s./ JAMES EDWIN WHEDBEE, M.Ed. (07-30-2008)
