Description and purpose of application:

Wipro Inc is setting up a 5G use case lab leveraging our partner products like Nokia Base station, Intel FlexRAN, Open source software and internally developed software and applications. The intent of setting up this lab is to realize 5G use cases that can be developed and tested to meet current and emerging requirements of our customers. The lab is meant to closely resemble a real-world 5G deployment scenario. It will deliver an end-to-end 5G testbed comprising of 5G Base Station, Packet core and UE nodes that support enhanced mobile broadband (eMBB), Ultra low latency communication (URLLC) and massive MTC including NB IoT services. The lab will also staff all the technical resources needed to test and optimize products in a real-world environment.
