

Exhibit 2

The following antennas will be deployed in the proposed system:

Base Station: PacWireless SAH57-90-17 (90* beam width): The base station will utilize a sectorized antenna system using one sector. The specific azimuths, beam tilts for each sector will be determined adjusted as part of the system tests

Remote/CPE: MTI Wireless Edge(58-23DP): This antenna has a beam width of 8*

All antennas will be mounted on existing Communications Towers
