EXPERIMENTATION DESCRIPTION

The modification to Call Sign WA2XZB requested in this application is intended to expand the research initiated under File 0136-EX-PL-1999. This expanded research will determine if proprietary millimeter transmitter designs that were created and are being tested in the 27 Ghz to 31 Ghz band can be extended successfully to operate in the 40.5 Ghz to 42.5 Ghz band.

As previously stated in File 0136-EX-PL-1999, all of the work in this series of experiments is expected to create a low-cost product for use by fixed wireless broadband service providers world-wide who plan to operate in any of the licensed LMDS bands.
