| Report No.:    | MTi240203001-04E1               |
|----------------|---------------------------------|
| Date of issue: | 2024-02-27                      |
| Applicant:     | YI ZHAO (SHENZHEN) CO., LIMITED |
| Product:       | EKSA H5                         |
| Model(s):      | H5, H5 SE                       |
|                |                                 |

**FCC ID:** 2A25A-H5

Shenzhen Microtest Co., Ltd. http://www.mtitest.com

The test report is only used for customer scientific research, teaching, internal quality control and other purposes, and is for internal reference only.

# Instructions

- 1. This test report shall not be partially reproduced without the written consent of the laboratory.
- 2. The test results in this test report are only responsible for the samples submitted
- 3. This test report is invalid without the seal and signature of the laboratory.
- 4. This test report is invalid if transferred, altered, or tampered with in any form without authorization.
- 5. Any objection to this test report shall be submitted to the laboratory within 15 days from the date of receipt of the report.

## **1** General Description

#### 1.1 Description of the EUT

| Product name:              | EKSA H5   |
|----------------------------|---|
| Model name:                | H5  |
| Series Model(s):           | H5 SE   |
| Model difference:          | All the models are the same circuit and module, but H5 SE does not have a transmitter and base, while H5 has a transmitter and base |
| Electrical rating:         | Input: DC 5V/ 0.5A<br>Battery: DC 3.7V 400mAh   |
| Accessories:               | USB-A to USB-C cable 0.65m<br>1. Charging base* 1 2. dongle* 1  |
| Hardware version:          | V03   |
| Software version:          | V02   |
| Test sample(s) number:     | MTi240203001-04S1001  |
| RF specification           |   |
| Bluetooth version:         | V5.0  |
| Operating frequency range: | 2402-2480MHz  |
| Channel number:            | 79  |
| Modulation type:           | GFSK, 4/π-DQPSK, 8DPSK  |
| Antenna(s) type:           | ceramic Antenna   |
| Antenna(s) gain:           | 1.8dBi  |

#### 1.2 Description of test modes

| No.   | Emission test modes |  |  |
|-------|---------------------|--|--|
| Mode1 | TX-GFSK             |  |  |
| Mode2 | TX-π/4-DQPSK        |  |  |
| Mode3 | TX-8DPSK            |  |  |

#### 1.2.1 Operation channel list

| Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) |
|---------|--------------------|---------|--------------------|---------|--------------------|---------|--------------------|
| 0       | 2402               | 20      | 2422               | 40      | 2442               | 60      | 2462               |
| 1       | 2403               | 21      | 2423               | 41      | 2443               | 61      | 2463               |
| 2       | 2404               | 22      | 2424               | 42      | 2444               | 62      | 2464               |
| 3       | 2405               | 23      | 2425               | 43      | 2445               | 63      | 2465               |
| 4       | 2406               | 24      | 2426               | 44      | 2446               | 64      | 2466               |
| 5       | 2407               | 25      | 2427               | 45      | 2447               | 65      | 2467               |
| 6       | 2408               | 26      | 2428               | 46      | 2448               | 66      | 2468               |
| 7       | 2409               | 27      | 2429               | 47      | 2449               | 67      | 2469               |

#### Test Channel List

#### Operation Band: 2400-2483.5 MHz

| Bandwidth | Lowest Channel (LCH) | Middle Channel (MCH) | Highest Channel (HCH) |  |
|-----------|----------------------|----------------------|-----------------------|--|
| (MHz)     | (MHz)                | (MHz)                | (MHz)                 |  |
| 1         | 2402                 | 2441                 | 2480                  |  |

Note: The test software provided by manufacturer is used to control EUT for working in engineering mode, that enables selectable channel, and capable of continuous transmitting mode.

#### Test Software: Blue Test3

For power setting, refer to below table.

| Mode      | 2402MHz | 2441MHz | 2480MHz |
|-----------|---------|---------|---------|
| GFSK      | -5      | -5      | -5      |
| π/4-DQPSK | -5      | -5      | -5      |
| 8DPSK     | -5      | -5      | -5      |

#### **1.3 Environmental Conditions**

During the measurement the environmental conditions were within the listed ranges:

| Temperature:          | 15°C ~ 35°C      |
|-----------------------|------------------|
| Humidity:             | 20% RH ~ 75% RH  |
| Atmospheric pressure: | 98 kPa ~ 101 kPa |

#### 1.4 Description of support units

| Support equipment list |              |      |   |  |  |  |
|------------------------|--------------|------|---|--|--|--|
| Description            | Manufacturer |      |   |  |  |  |
| Mobile phone           | neo / Vivo   |      |   |  |  |  |
| Adapter                | XY-PQ018E1   | /    | Dongguan Xu Yuan<br>Electronic Technology<br>Co., Ltd |  |  |  |
| Support cable list     |              |      |   |  |  |  |
| Description            | Length (m)   | From | То  |  |  |  |
| /                      | /            | /    | /   |  |  |  |

#### 1.5 Measurement uncertainty

| Measurement                              | Uncertainty |
|--|-------------|
| Conducted emissions (AMN 150kHz~30MHz)   | ±3.1dB      |
| Occupied channel bandwidth               | ±3 %        |
| RF output power, conducted               | ±1 dB       |
| Time                                     | ±1 %        |
| Unwanted Emissions, conducted            | ±1 dB       |
| Radiated spurious emissions (above 1GHz) | ±5.3dB      |
| Radiated spurious emissions (9kHz~30MHz) | ±4.3dB      |
| Radiated spurious emissions (30MHz~1GHz) | ±4.7dB      |
| Temperature                              | ±1 °C       |
| Humidity                                 | ±5%         |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 2 Summary of Test Result

| No. | Item  | Standard           | Requirement                         | Result |
|-----|---|--------------------|-------------------------------------|--------|
| 1   | Antenna requirement   | 47 CFR Part 15.247 | 47 CFR 15.203                       | Pass   |
| 2   | Conducted Emission at AC power line                             | 47 CFR Part 15.247 | 47 CFR 15.207(a)                    | Pass   |
| 3   | Occupied Bandwidth  | 47 CFR Part 15.247 | 47 CFR 15. 247(a)(1)                | Pass   |
| 4   | Maximum Conducted Output<br>Power                               | 47 CFR Part 15.247 | 47 CFR 15.247(b)(1)                 | Pass   |
| 5   | Channel Separation  | 47 CFR Part 15.247 | 47 CFR 15.247(a)(1)                 | Pass   |
| 6   | Number of Hopping<br>Frequencies                                | 47 CFR Part 15.247 | 47 CFR<br>15.247(a)(1)(iii)         | Pass   |

## 5 Evaluation Results (Evaluation)

#### 5.1 Antenna requirement

| Refer to 47 CFR Part 15.203, an intentional radiator shall be designed to<br>ensure that no antenna other than that furnished by the responsible party<br>shall be used with the device. The use of a permanently attached antenna or<br>of an antenna that uses a unique coupling to the intentional radiator shall be<br>considered sufficient to comply with the provisions of this section. |
|---|
| ei<br>sł  |

#### 5.1.1 Conclusion:

The antenna of the EUT is permanently attached. The EUT complies with the requirement of FCC PART 15.203.

## 6 Radio Spectrum Matter Test Results (RF)

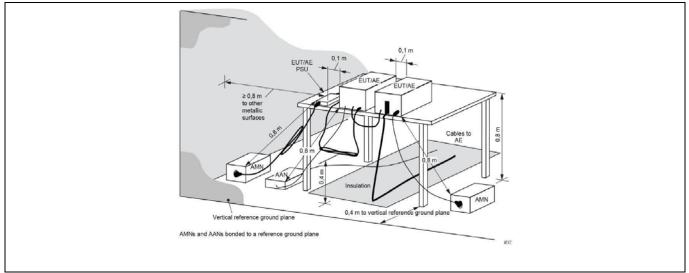

#### 6.1 Conducted Emission at AC power line

| Test Requirement: | Refer to 47 CFR 15.207(a), Except as shown in paragraphs (b)and (c)of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 µH/50 ohms line impedance stabilization network (LISN). |            |           |  |  |
|-------------------|--|------------|-----------|--|--|
| Test Limit:       | Frequency of emission (MHz) Conducted limit (dBµV)   |            |           |  |  |

#### 6.3 Maximum Conducted Output Power

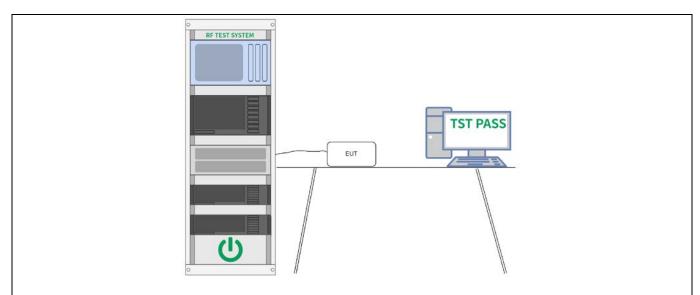

| Test Requirement: | 47 CFR 15.247(b)(1)   |
|-------------------|---|
| Test Limit:       | Refer to 47 CFR 15.247(b)(1), For frequency hopping systems operating in the 2400-2483.5 MHz band employing at least 75 non-overlapping hopping channels, and all frequency hopping systems in the 5725-5850 MHz band: 1 watt. For all other frequency hopping systems in the 2400-2483.5 MHz band: 0.125 watts.  |
| Test Method:      | ANSI C63.10-2013, section 7.8.5<br>KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Procedure:        | <ul> <li>This is an RF-conducted test to evaluate maximum peak output power. Use a direct connection between the antenna port of the unlicensed wireless device and the spectrum analyzer, through suitable attenuation. The hopping shall be disabled for this test: <ul> <li>a) Use the following spectrum analyzer settings:</li> <li>1) Span: Approximately five times the 20 dB bandwidth, centered on a hopping channel.</li> <li>2) RBW &gt; 20 dB bandwidth of the emission being measured.</li> <li>3) VBW &gt;= RBW.</li> <li>4) Sweep: Auto.</li> <li>5) Detector function: Peak.</li> <li>6) Trace: Max hold.</li> <li>b) Allow trace to stabilize.</li> <li>c) Use the marker-to-peak function to set the marker to the peak of the emission.</li> <li>d) The indicated level is the peak output power, after any corrections for external attenuators and cables.</li> <li>e) A plot of the test results and setup description shall be included in the test report.</li> <li>NOTE—A peak responding power meter may be used, where the power meter and sensor system video bandwidth is greater than the occupied bandwidth of the unlicensed wireless device, rather than a spectrum analyzer.</li> </ul> </li> </ul> |

#### 6.3.1 E.U.T. Operation:

| Operating Environment: |         |      |              |        |  |                       |        |

#### 6.5 Number of Hopping Frequencies

| Test Requirement: | 47 CFR 15.247(a)(1)(iii)  |
|-------------------|---|
| Test Limit:       | Refer to 47 CFR 15.247(a)(1)(iii), Fequency hopping systems in the 2400-<br>2483.5 MHz band shall use at least 15 channels. The average time of<br>occupancy on any channel shall not be greater than 0.4 seconds within a<br>period of 0.4 seconds multiplied by the number of hopping channels<br>employed. Frequency hopping systems may avoid or suppress transmissions<br>on a particular hopping frequency provided that a minimum of 15 channels<br>are used.  |
| Test Method:      | ANSI C63.10-2013, section 7.8.3<br>KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Procedure:        | <ul> <li>The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:</li> <li>a) Span: The frequency band of operation. Depending on the number of channels the device supports, it may be necessary to divide the frequency range of operation across multiple spans, to allow the individual channels to be clearly seen.</li> <li>b) RBW: To identify clearly the individual channels, set the RBW to less than 30% of the channel spacing or the 20 dB bandwidth, whichever is smaller.</li> <li>c) VBW ≥ RBW.</li> <li>d) Sweep: Auto.</li> <li>e) Detector function: Peak.</li> <li>f) Trace: Max hold.</li> <li>g) Allow the trace to stabilize.</li> <li>It might prove necessary to break the span up into subranges to show clearly all of the hopping frequencies. Compliance of an EUT with the appropriate regulatory limit shall be determined for the number of hopping channels. A plot of the data shall be included in the test report.</li> </ul> |

#### 6.5.1 E.U.T. Operation:

| Operating Environm | ent: |            |        |                       |        |
|--------------------|------|------------|--------|-----------------------|--------|
| Temperature: 21.6  | °C   | Humidity:  | 74.9 % | Atmospheric Pressure: | 98 kPa |
| Pre test mode:     | Mod  | e1, Mode2, | Mode3  |                       |        |
| Final test mode:   | Mod  | e1, Mode2, | Mode3  |                       |        |

#### 6.5.2 Test Setup Diagram:

#### 6.5.3 Test Data:

#### 6.6 Dwell Time

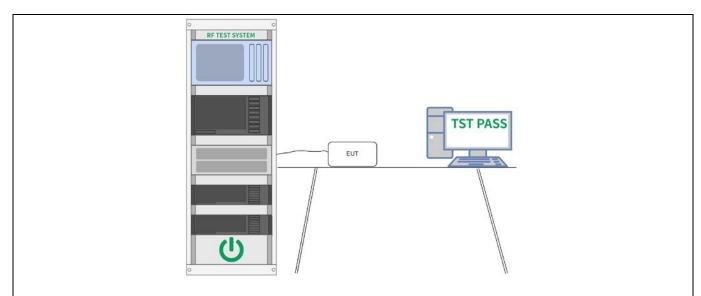

| Test Requirement: | 47 CFR 15.247(a)(1)(iii)   |
|-------------------|--|
| Test Limit:       | Refer to 47 CFR 15.247(a)(1)(iii), Fequency hopping systems in the 2400-<br>2483.5 MHz band shall use at least 15 channels. The average time of<br>occupancy on any channel shall not be greater than 0.4 seconds within a<br>period of 0.4 seconds multiplied by the number of hopping channels<br>employed. Frequency hopping systems may avoid or suppress transmissions<br>on a particular hopping frequency provided that a minimum of 15 channels<br>are used.   |
| Test Method:      | ANSI C63.10-2013, section 7.8.4<br>KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Procedure:        | The EUT shall have its hopping function enabled. Use the following spectrum analyzer settings:<br>a) Span: Zero span, centered on a hopping channel.<br>b) RBW shall be <= channel spacing and where possible RBW should be set >> 1 / T, where T is the expected dwell time per channel.<br>c) Sweep: As necessary to capture the entire dwell time per hopping channel; where possible use a video trigger and trigger delay so that the transmitted signal starts a little to the right of the start of the plot. The trigger level might need slight adjustment to prevent triggering when the system hops on an adjacent channel; a second plot might be needed with a longer sweep time to show two successive hops on a channel.<br>d) Detector function: Peak.<br>e) Trace: Max hold.<br>Use the marker-delta function to determine the transmit time per hop. If this value varies with different modes of operation (data rate, modulation format, number of hopping channels, etc.), then repeat this test for each variation in transmit time.<br>Repeat the measurement using a longer sweep time to determine the number of hops over the period specified in the requirements. The sweep time shall be equal to, or less than, the period specified in the requirements, using the following equation:<br>(Number of hops in the period specified in the requirements) = (number of hops on spectrum analyzer) × (period specified in the requirements, using the following equation:<br>(Number of hops in the period specified in the requirements. If the number of hops in a specific time varies with different modes of operation different modes of operation different modes of operation the requirements) = (number of hops in the period specified in the requirements, using the following equation:<br>(Number of hops in the period specified in the requirements. If the number of hops in a specific time varies with different modes of operation (data rate, modulation format, number of hops pin a specific time varies with different modes of operation (data rate, modulation format, number of hops pin a s |

#### 6.7 RF conducted spurious emissions and band edge measurement

| Test Requirement: | 47 CFR 15.247(d), 15.209, 15.205   |
|-------------------|--|
| Test Limit:       | Refer to 47 CFR 15.247(d), In any 100 kHz bandwidth outside the frequency<br>band in which the spread spectrum or digitally modulated intentional radiator<br>is operating, the radio frequency power that is produced by the intentional<br>radiator shall be at least 20 dB below that in the 100 kHz bandwidth within<br>the band that contains the highest level of the desired power, based on either<br>an RF conducted or a radiated measurement, provided the transmitter<br>demonstrates compliance with the peak conducted power limits. If the<br>transmitter complies with the conducted power limits based on the use of<br>RMS averaging over a time interval, as permitted under paragraph (b)(3) of<br>this section, the attenuation required under this paragraph shall be 30 dB<br>instead of 20 dB. Attenuation below the general limits specified in § 15.209(a)<br>is not required. |
| Test Method:      | ANSI C63.10-2013 section 7.8.8<br>KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Procedure:        | Conducted spurious emissions shall be measured for the transmit frequency, per 5.5 and 5.6, and at the maximum transmit powers.<br>Connect the primary antenna port through an attenuator to the spectrum analyzer input; in the results, account for all losses between the unlicensed wireless device output and the spectrum analyzer. The instrument shall span 30 MHz to 10 times the operating frequency in GHz, with a resolution bandwidth of 100 kHz, video bandwidth of 300 kHz, and a coupled sweep time with a peak detector. The band 30 MHz to the highest frequency may be split into smaller spans, as long as the entire spectrum is covered.   |

| Final test mode | e:       |      |              | re-test mode w<br>ded in the repo | ere tested, only the data or<br>rt | of the worst mode |
| Noto            |          |      |              |                                   |                                    |                   |

Note:

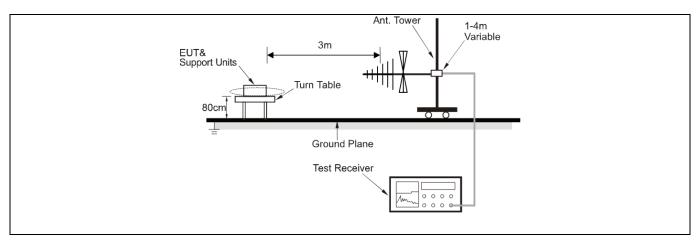

The amplitude of spurious emissions which are attenuated more than 20 dB below the limits are not reported.

All modes of operation of the EUT were investigated, and only the worst-case results are reported. There were no emissions found below 30MHz within 20dB of the limit.
