### Precautions

- Precautions Measurements are for informational purposes only and are not to be taken as medical advice.
- Keep your feet dry and clean before use.
- For best results, take measurements at the same time each day.
- Do not use this product after strenuous exercise.
- This product is only subjected to static pressure, please do not jump onto the scale for weighing. Do not use chemical solvents to wipe this product, use a cloth dampened with water, and do not soak the scale body.
- Please place it horizontally on a flat hard floor.
- Do not put anything on the scale if it is not in use.

01

- be de-energized when removing the batteries.

# Prohibition

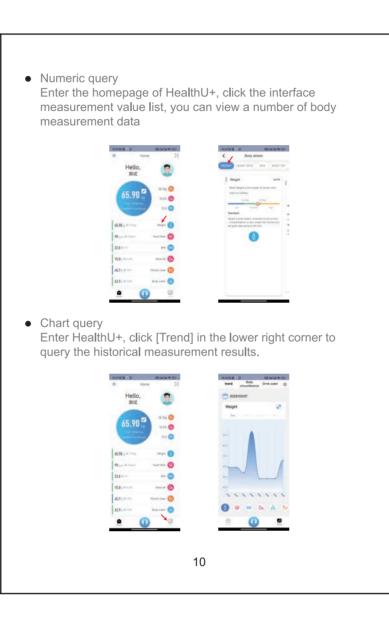

- Prohibited matters It is strictly forbidden to disassemble, crush, puncture, short-circuit this product or throw it into water, fire or expose it to a temperature higher than 60°C (140°F). • People who have medical devices such as cardiac pacemakers
- in their bodies are prohibited from using this scale The product is easily damaged and dangerous if it is hit or
- dropped. • Do not use the device in dusty, wet, dirty or near magnetic
- fields, so as not to cause internal circuit failure of the device. Please use this device within the temperature range of 5°C-40°C. When the ambient temperature is too high or too
- low, it may cause equipment failure. • Do not place the device near heat sources or exposed fire sources, such as electric heaters, microwave ovens, ovens, water heaters, stove fires, candles, or other places that may generate high temperatures.
- Do not use on wet ground or places that are prone to slipping. • Do not measure when the body or feet are wet, otherwise it may cause body fall, inaccurate measurement data, water entering the machine and other failures.

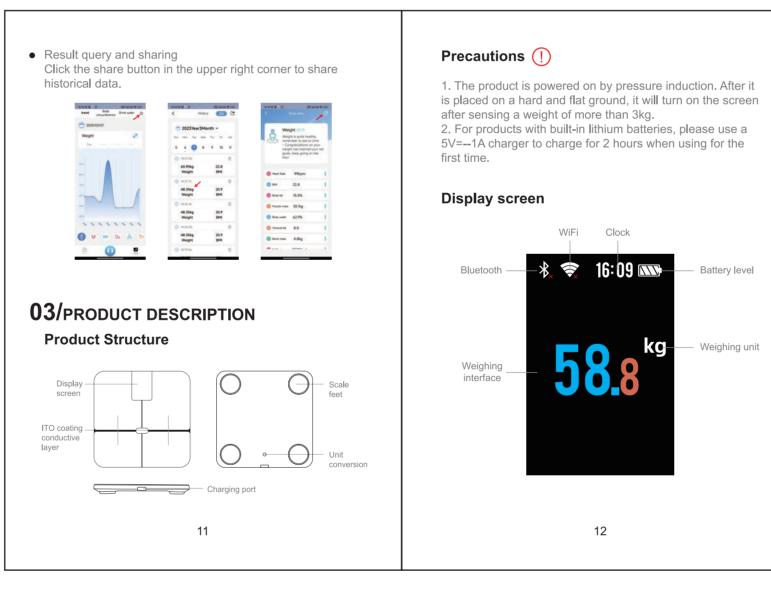

02

- Note: It must be measured with bare feet, and the skin of the feet is evenly in contact with the "ITO electrode pattern". The plastic bag of the product packaging must be removed before the skin can touch the electrode pad for measurement. If the scale has been measured several times in a row, please perform scale measurement again after the screen returns to "0.00".
- Start measuring Start to measure on the scale. When the weight is stable, the value of the scale body will flash three times at the same time, and then enter the state of body fat measurement. Wait for all the measurement data to stop flashing and lock, and then it will be displayed synchronously on the [HealthU+] App interface of the mobile phone. After the test is completed, the scale body will automatically shut down after displaying for 10 seconds.

Common problems and solutions abnormal situation
<b>Can not boot</b> Connect to the power supply to check whether the power
supply is good.
Display "FAIL" WI-FI network configuration failed, please re-configure the network.
The data display is abnormal during measurement
Please measure with bare feet and keep the soles of your feet clean.
Failed to obtain impedance by measuring fat, please
re-measure on the scale.
Show (!)
Overload display, please do not exceed 180kg when using.
No display on the screen, errors, missing pictures Make sure your phone's Bluetooth is always on.
Sudden stop during operation
Continuous use for too long, product overheating protection Re-open the shutdown button after the product cools down

SAR Information Statement Your Electronic scale is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for Electronic scale employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. \* Tests for SAR are conducted with the Electronic scale transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the Electronic scale while operating can be well below the maximum value. This is because the Electronic scale is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a Electronic scale model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this Electronic scale when tested for use at the Limbs is 0.60 W/Kg (1g). While there may be differences between the SAR levels of various Electronic scale and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this Electronic scale with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this Electronic scale is on file with the FCC and can be found

searching on

under the Display Grant section of http://www.fcc.gov/ oet/fccid after undesired operation.

FCC ID: 2A26P-RA031 Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at http://www.wow-com.com. \* In the United States and Canada, the SAR limit for Electronic scale used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements. The SAR test distance is 0mm.

FCC Statement Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and

on, the user is encouraged to try to correct the interference by one or more of the following measures: -- Reorient or relocate the receiving antenna. -- Increase the separation between the equipment and receiver. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. - Consult the dealer or an experienced radio/TV technician for help This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions (1)this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause
