TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch is a subcontractor to TÜV SÜD Product Service GmbH according to the principles outlined in ISO 17025.

TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval.

## 2 Details about the Test Laboratory

## **Details about the Test Laboratory**

Test Site 1

Company name: TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch

No.16 Lane, 1951 Du Hui Road,

Shanghai 201108,

P.R. China

Test Firm FCC

Registration Number:

Designation

number:

CN1183

820234

IC Company

Number:

25988

CAB identifier: CN0101

Telephone: +86 21 6141 0123 Fax: +86 21 6140 8600

# 3 Description of the Equipment Under Test

Product: Five-channel transmitter

Model no.: DD251H

FCC ID: 2A27U251H

Rating: DV 3V

**RF** Transmission

Frequency:

433.92MHz

Modulation: FSK

Antenna Type: PCB antenna

Antenna Gain: -3.0dBi

Description of the EUT: The Equipment Under Test (EUT) was a Five-channel

transmitter, transmitter operated at 433. 92MHz.

Test sample no.: SHA-716249-1

# 4 Summary of Test Standards

| Test Standards           |   |  |  |  |  |
|--------------------------|---|--|--|--|--|
| FCC Part 15<br>Subpart C | PART 15 - RADIO FREQUENCY DEVICES Subpart C - Intentional Radiators |  |  |  |  |

All the test methods were according to ANSI C63.10-2013.

# 5 Summary of Test Results

|  | Technical Requirem                    | ents  |                |                |

| §15.231(c)                               | Bandwidth Measurement                 | 13    | Shield<br>room | Pass           |
| §15.231(a)(1)                            | Deactivation Time                     | 14    | Shield<br>room | Pass           |
| §15.203                                  | Antenna requirement                   |       | See Note 2     | Pass           |

Note 1: N/A=Not Applicable. Conducted emission is not apply for battery operated device.

Note 2: The EUT uses a PCB Antenna, which gain is -3.0dBi. In accordance to §15.203, It is considered sufficiently to comply with the provisions of this section.

## 6 General Remarks

#### **Remarks**

This submittal(s) (test report) is intended for FCC ID: 2A27U251H, complies with Section 15.205, 15.209, 15.231 of the FCC Part 15, Subpart C Rules.

### **SUMMARY:**

All tests according to the regulations cited on page 5 were

- - Performed
- ☐ Not Performed

The Equipment Under Test

- - Fulfills the general approval requirements.
- ☐ **Does not** fulfill the general approval requirements.

Sample Received Date: April 11,2023

## 8 Test Setups

## 8.1 Radiated test setups

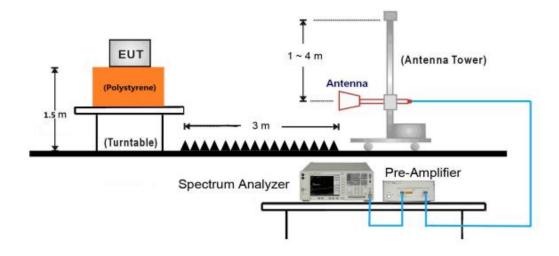

9kHz ~ 30MHz Test Setup:

30MHz ~ 1GHz Test Setup:

## 1GHz ~ 18GHz Test Setup:

## 9 Test Methodology

### 9.1 Radiated Emission

#### **Test Method**

- 1. The EUT was place on a turn table which is 1.5m above ground plane for above 1GHz and 0.8m above ground for below 1GHz at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2. The EUT was set 3 meters away from the interference receiving antenna, which was mounted on the top of a variable height antenna tower.
- 3. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 5. Use the following spectrum analyzer settings According to C63.10: For Above 1GHz

Span = wide enough to capture the peak level of the in-band emission and all spurious RBW = 1MHz, VBW≥3RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

For Below 1GHz

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious RBW = 100 KHz, VBW≥3RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

#### Note:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 KHz for Quasi-peak detection (QP) at frequency below 1GHz.
- 2. he resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 3MHz for peak detection (PK) at frequency above 1GHz.
- 3. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 3MHz for RMS Average (duty cycle ≥98%) for peak detection at frequency above 1GHz
- 4. If the emission is pulsed (duty cycle <98%), modify the unit for continuous operation: use the settings shown above, then correct the reading by subcontracting the peak to average duty cycle correction factor 20log (duty cycle)., derived from the appropriate duty cycle calculation.

### Limit

According to §15.231 (b), the field strength of emissions from intentional radiators operated under this section shall not exceed the following:

| Fundamental frequency<br>(MHz) | Field Strength of Fundamental (Microvolts /meter) | Field Strength of spurious emissions ((Microvolts /meter) |
|--------------------------------|---|---|
| 40.66-40.70                    | 2,250   | 225   |
| 70-130                         | 1,250   | 125   |
| 130-174                        | 1,250 to 3,370 *                                  | 125 to 3750 *   |
| 174-260                        | 3,750   | 375   |
| 260-470 √                      | 3,750 to 12, 500*                                 | 375 to 1,250*   |
| Above 470                      | 12,500  | 1,250   |

Limits for 15.209 Radiated emission limits; general requirements

| Frequency (MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|-----------------|-----------------------------------|-------------------------------|
| 0.009-0.490     | 2400/F(kHz)                       | 300                           |
| 0.490-1.705     | 24000/F(kHz)                      | 30                            |
| 1.705-30.0      | 30                                | 30                            |
| 30-88           | 100                               | 3                             |
| 88-216          | 150                               | 3                             |
| 216-960         | 200                               | 3                             |
| Above 960       | 500                               | 3                             |

| Frequency             | Limit at 3m (dBuV/m)       |
|-----------------------|----------------------------|
| 0.009 MHz - 0.490 MHz | 128.5 to 93.8 <sup>1</sup> |
| 0.490 MHz – 1.705 MHz | 73.8 to 63 <sup>1</sup>    |
| 1.705 MHz – 30 MHz    | 69.5 <sup>1</sup>          |
| 30 MHz – 88 MHz       | 40.0 <sup>1</sup>          |
| 88 MHz – 216 MHz      | 43.5 <sup>1</sup>          |
| 216 MHz – 960 MHz     | 46.0 <sup>1</sup>          |
| Above 960 MHz         | 54.0 <sup>1</sup>          |
| Above 1000 MHz        | <b>54.0</b> <sup>2</sup>   |
| Above 1000 MHz        | 74.0 <sup>3</sup>          |

<sup>&</sup>lt;sup>1</sup>Limit is with detector with bandwidths as defined in CISPR-16-1-1 except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz where an Average detector is used.

<sup>&</sup>lt;sup>2</sup>Limit is with 1 MHz measurement bandwidth and using an Average detector <sup>3</sup>Limit is with 1 MHz measurement bandwidth and using a Peak detector

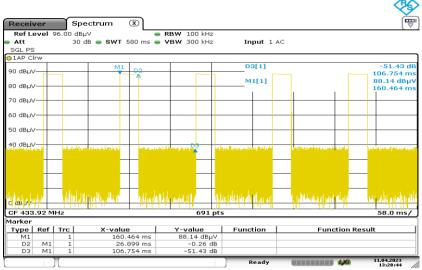

## Spurious radiated emissions for transmitter

| AV                | 1301.76   | V        | 33.28    | -11.40  | 21.88    | 54.00  | 32.12  | Restricted band |  |

#### Remark

- Corrected Amplitude = Read level + Corrector factor
   Above 1GHz: Corrector factor = Antenna Factor + Cable Loss- Amplifier Gain
   Below 1GHz: Corrector factor = Antenna Factor + Cable Loss
- 2. Correct Factor = Antenna Factor + Cable Loss (+ Amplifier, for higher than 1GHz)
- 3. Corrected Reading = Original Receiver Reading + Correct Factor
- 4. Only the worst data listed in this report, Other frequency was 20dB below the limit
- 5. AV Emission Level= PK Emission Level+20log(dutycycle), Duty Cycle = 26.899/100 = 26.899%, Duty Cycle Factor = 20log (Duty Cycle) = -11.40

Date: 11.APR.2023 13:28:45

### 9.2 Bandwidth Measurement

#### **Test Method**

- 1. Set to the maximum power setting and enable the EUT transmit continuously.
- 2. Use the following test receiver settings:

  Span = approximately 5 times the 20dB bandwidth, centered on a hopping channel

  RBW =1% to 5% of the 20dB bandwidth of the emission being measured, VBW≥RBW,

  Sweep = auto, Detector function = peak, Trace = max hold
- 3. Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Measure the frequency difference of two frequencies that were attenuated 20 dB from the reference level. Record the frequency difference as the emission bandwidth. Record the results.
- 4. Repeat above procedures until all frequencies measured were complete.

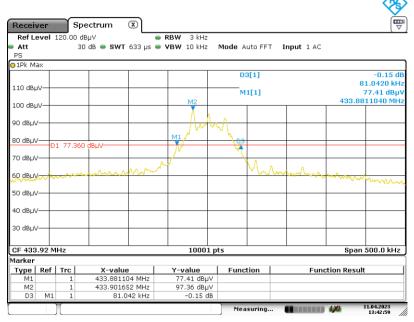

#### Limit

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70MHz and below 900MHz. For devices operating above 900MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20dB down from the modulated carrier.

The limit for the EUT = 0.25% \* 433.92 MHz = 1084 kHz

#### **Test Result**

| Channel | 20dB Bandwidth (KHz) | Limit (KHz) |
|---------|----------------------|-------------|
| 1       | 81.042               | 1084        |

Date: 11.APR.2023 13:42:59

### 9.3 Deactivation Time

#### **Test Method**

- 1. Set to the maximum power setting and enable the EUT in transmitting mode.
- 2. Set center frequency of spectrum analyzer=operating frequency.
- 3. Set the spectrum analyzer as RBW=120 KHz, VBW=1MHz, Span=0Hz.
- 4. Repeat above procedures until all frequency measured was complete.

#### Limit

According to FCC Part 15.231 (a), the transmitter shall be complied the following requirements:

- ( $\checkmark$ ) (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.
- (2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.
- (3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

Deactivation Time

# 11 System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 were:

| Items                | Extended Uncertainty               |  |
|----------------------|------------------------------------|--|
| Radiated Disturbance | 30MHz to 1GHz, 5.03dB (Horizontal) |  |
|                      | 5.11dB (Vertical)                  |  |
|                      | 1GHz to 18GHz, 5.15dB (Horizontal) |  |
|                      | 5.12dB (Vertical)                  |  |
|                      | 18GHz to 25GHz, 4.76dB             |  |

Measurement Uncertainty Decision Rule:

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115: 2021, clause 4.4.3 and 4.5.1.
