Figure 1: Final FCC ID 2A2SBAIR1 Label Placement and Rendering for ActiveSense AIR1 Sensor

## LABEL APPLICATION

At time of manufacture of the AIR1 Sensor, a unique product label is applied to the device that contains several pieces of identifying metadata. Along with a unique device hardware ID and barcode, the FCC ID of the device is also printed on this label. The label is applied automatically during the final assembly and provisioning step, and is designed with a material that is intended to stay legible and affixed to the device for the entirety of its operation.
