# FCC RF Exposure Evaluation

# 1. Product Information

FC	C RF Exposure Evaluation			
Product Information				
FCC ID	2A2VW-C9L			
Product name	SolarCam D1 Lite			
Model number	C9L			
Additional Model No.	C9E, C9P, C9S, DC9L, DC9E, DC9P, DC9S			
Model Declaration	PCB board, structure and internal of these model(s) are the same, So no additional models were tested			
Dowor outpoly	Input: DC 5V, 1A			
Power supply	DC 3.7V by Rechargeable Li-ion Battery, 5Ah			
	GFSK for Bluetooth V5.0(DTS)			
Modulation Type	IEEE 802.11b: DSSS (CCK, DQPSK, DBPSK)			
Modulation Type	IEEE 802.11g: OFDM (64QAM, 16QAM, QPSK, BPSK)			
	IEEE 802.11n: OFDM (64QAM, 16QAM, QPSK, BPSK)			
Antenna Type	External Antenna			
Antenna Gain	3.2dBi(Max.)			
Hardware version	V1.1			
Software version	V2.1.6			
ECC Operation frequency	2402MHz-2480MHz			
FCC Operation frequency	2412MHz-2462MHz			
Exposure category	General population/uncontrolled environment			
EUT Type	Production Unit			
Device Type	Mobile Devices			

## 2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

Shenzhen LCS Compliance Testing Laboratory Ltd. Add: 101, 201 Bldg A & 301 Bldg C, Juji Industrial Park Yabianxueziwei, Shajing Street, Baoan District, Shenzhen, 518000, China Tel: +(86) 0755-82591330 | E-mail: webmaster@lcs-cert.com | Web: www.lcs-cert.com Scan code to check authenticity

### 3. Limit

#### 3. 1 Refer Evaluation Method

ANSI C95.1–1999: IEEE Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3 kHz to 300 GHz.

FCC KDB publication 447498 D01 General 1 RF Exposure Guidance v06: Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies.

FCC CFR 47 part1 1.1310: Radiofrequency radiation exposure limits.

FCC CFR 47 part2 2.1091: Radiofrequency radiation exposure evaluation: mobile devices

#### 3. 2 Limit

ni	可於測版份							
Limits for Maximum Permissible Exposure (MPE)/Controlled Exposure								
~	Frequency	Electric Field	Magnetic Field		Averaging Time			
	Range(MHz)	Strength(V/m)	Strength(A/m)	(mW/cm²)	(minute)			
		Limits for Oc	cupational/Control	led Exposure				
	0.3 – 3.0	614	1.63	(100) *	6			
	3.0 – 30	1842/f	4.89/f	(900/f <sup>2</sup> )*	6

L	1500 – 100,000	/	/	1.0	30			

F=frequency in MHz \*=Plane-wave equivalent power density

## 4. MPE Calculation Method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01 立讯检测股份

S=PG/4πR<sup>2</sup>

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator R=distance to the center of radiation of the antenna

## 5. Antenna Information

EUT antenna can only use antennas certificated as follows provided by manufacturer;

Internal Identification	Antenna type and antenna number	Operate frequency band	Maximum antenna gain	Note
Antenna	External Antenna	2400MHz-2500MHz	3.2dBi	BT/WIFI Antenna
Antenna		240010112-230010112	5.2001	Anten

#### 8. Measurement Results

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r = 20 cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

IEEE 802.11n HT20	16.0	39.8107	3.2	0.0165	1.0000

Remark:

1. Output power including tune-up tolerance;

2. MPE evaluate distance is 20cm from user manual provide by manufacturer;

3. The Bluetooth/WIFI cannot be launched simultaneously and does not need to evaluate for a simultaneous launch.

## 9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
