# Test Report

No.: AJT210825055EA-1

Applicant Name : RODEO DRIVE TOYS LIMITED  
 Applicant Address : UNIT 5, 13/F, HOUSTON CENTRE, NO. 63 MODY ROAD, TSIM SHA TSUI EAST, KOWLOON, HONGKONG  
 Manufacturer Name : RODEO DRIVE TOYS LIMITED  
 Manufacturer Address : UNIT 5, 13/F, HOUSTON CENTRE, NO. 63 MODY ROAD, TSIM SHA TSUI EAST, KOWLOON, HONGKONG

The following samples were submitted and identified by/on behalf of the client as:

Sample Description : TORNADO STUNT R/C BLUE/ORG  
 Model No. : RD19H003  
 Sample Received Date : 25 Aug, 2021  
 Testing Completed Date : 07 Sep, 2021

Tests conducted: For compliance with application, refer to attached page(s) for details.

| Test Requested:  | Conclusion |
|--|------------|
| FCC part 15, Subpart C, Section 15. 227 & ANSI C63,10-2013 | PASS       |

Tested by: Glory Reviewed by: Fly Liang Approved by: Chandro Jone  
 Position: Technical Supervisor  
 Date: 2021-09-07

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

## 1 Test Standards

|  |
|--|
| The tests were performed according to following standards:   |
| FCC part 15, Subpart C, Section 15. 227: Operation within the band 26.96-27.28 MHz                               |
| ANSI C63,10-2013: American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices |

## 2 Summary

### 2.1 General Remarks

|                                |                                |
|--------------------------------|--------------------------------|
| Date of receipt of test sample | 25 Aug, 2021                   |
| Testing commenced on           | 25 Aug, 2021 ---- 07 Sep, 2021 |
| Testing concluded on           | 07 Sep, 2021                   |

### 2.2 Final Assessment

| Test Content:  | Assessment                    |
|--|-------------------------------|
| The RF requirements pertaining to the technical standards and tested operation modes are | Fulfilled                     |
| The equipment under test   | Fulfilled the RF requirements |

## 3 Equipment Under Test

### 3.1 Short Description of the Equipment Under Test (EUT)

|   |                            |
|---|----------------------------|
| EUT Name  | TORNADO STUNT R/C BLUE/ORG |
| Model No.   | RD19H003                   |
| FCC ID  | 2A2XJ-RD19H003             |
| Number of Tested Samples  | 1                          |
| Power Supply Voltage  | DC 3.0V(AAA*2)             |
| Operating Mode  | TX mode                    |
| Operation Frequency   | 27.145MHz                  |
| Number of Channel   | 1                          |
| Modulation  | FM                         |
| Antenna Type  | Wire Antenna               |
| Antenna Gain  | 0dBi                       |
| NOTE: 1. The above EUT information is declared by manufacturer and for more detailed features description, please refers to the manufacturer's specifications or user's manual. The laboratory is not responsible for the accuracy of the information provided by manufacturer. |                            |

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

## 3.2 EUT Configuration

(The CDF filled by the applicant can be viewed at the test laboratory.)

The following peripheral devices and interface cables were connected during the measurement:

Not Applicable

## 3.3 Description of Test Modes

| NO. | Frequency | Test Mode Description |
|-----|-----------|-----------------------|
| 1   | 27.145MHz | TX mode               |

Note:

1. All the test modes can be supply by new battery, and only the data of the worst case recorded in the test report.
2. For radiated emission, 3axis were chosen for testing for each applicable mode.

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. ## 4 Test Environment

### 4.1 Address of the Test Laboratory

|                  |  |
|------------------|--|
| Test Laboratory: | AJT Testing Services Limited   |
| Test Site:       | 1/F, NO.1, WENHUA SOUTH ROAD, CHENGHUA INDUSTRIAL ZONE, CHENGHAI DISTRICT, GUANGDONG, PEOPLE'S REPUBLIC OF CHINA |
| Tel:             | 86-754-85860999  |
| Fax:             | 86-754-86984098  |

### 4.2 Test Facility

| The test facility is recognized, certified, or accredited by the following organizations: |            |
|---|------------|
| CNAS Accreditation NO.:   | L4735      |
| A2LA Accreditation NO.:   | 5443.01    |
| Designation Number:   | CN1263     |
| Test Firm Registration Number:  | 127385     |
| Industry Canada Site Registration Number:   | 25345      |
| FCC Registration NO.:   | 0028094555 |

### 4.3 Environmental Conditions

| During the measurement the environmental conditions were within the listed ranges: |           |
|--|-----------|
| Temperature  | 15~35°C   |
| Humidity   | 30~75% RH |

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

## 4.4 Statement of the Measurement Uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. Furthermore, component and process variability of devices are similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

| Measurement Uncertainty      |         |
|------------------------------|---------|
| Conducted Emission (CE)      | ±2.14dB |
| Radiated Emission below 1GHz | ±4.88dB |
| Radiated Emission above 1GHz | ±5.26dB |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 4.5 Test Types and Results

| Standard: FCC part 15, Subpart C |                         |        |                              |
|----------------------------------|-------------------------|--------|------------------------------|
| Standard Section                 | Test Type               | Result | Remark                       |
| §15.207                          | Conducted Emission (CE) | N/A    | EUT is powered by battery    |
| §15.227 & §15.209                | Radiated Emission (RE)  | Pass   | Compliant                    |
| §15.215                          | 20dB Bandwidth          | Pass   | Compliant                    |
| §15.203                          | Antenna Requirement     | Pass   | No antenna connector is used |

Note: The conducted limits are not required for devices which only employ battery power for operation.

## 5 Test Conditions and Results

### 5.1 Radiated Emission (RE)

For test instruments and accessories used see section 6

#### 5.1.1 Test Procedures

The basic test procedure was in accordance with ANSI C63.10 (section 6).

- (1) The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m chamber room. The table was rotated 360 degrees to determine the position of the highest radiation. (Below 1000MHz)
- (2) The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m chamber room. The table was rotated 360 degrees to determine the position of the highest radiation. (Below 30MHz)

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

Page 6 of 20

# Test Report

No.: AJT200807027EA-1

- (3) The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- (4) The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- (5) For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- (6) The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1GHz.
- (7) During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X,Y & Z) and considered typical configuration to obtain worst position Y, manipulating interconnecting cables, For battery operated equipment, the equipment tests shall be perform using new battery. The turntable was rotated to maximize the emission level.
- (8) For below 30MHz, a loop antenna with its vertical plane is place 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1m above the ground.

**Note:**

1. The resolution bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection at frequency below 1GHz.
2. Emission level (dBμV/m) = Raw value (dBμV) + Correction Factor (dB/m)
3. Correction Factor (dB/m) = Antenna Factor (dB/m) + Cable Factor (dB)
4. Margin value = Emission level – Limit value.
5. Fundamental AV value = PK Emission + AV Factor

## 5.1.2 Test Setup

Below 30MHz

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. # Test Report

No.: AJT200807027EA-1

## 5.1.3 Test Limits

Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

| Frequencies (MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|-------------------|-----------------------------------|-------------------------------|
| 0.009 ~ 0.490     | 2400/F(kHz)                       | 300                           |
| 0.490 ~ 1.705     | 24000/F(kHz)                      | 30                            |
| 1.705 ~ 30.0      | 30                                | 30                            |
| 30 ~ 88           | 100                               | 3                             |
| 88 ~ 216          | 150                               | 3                             |
| 216 ~ 960         | 200                               | 3                             |
| Above 960         | 500                               | 3                             |

According to §15. 227(a), the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

| Fundamental Range of Fundamental (MHz) | Field Strength of Fundamental Emission (Peak) (μV/m) | Field Strength of Fundamental Emission (average) (μV/m) |
|--|--|---|
| 26.96 ~ 27.28                          | 100,000(100dBμV/m)                                   | 10,000(80dBμV/m)  |

Note:

1. The lower limit shall apply at the transition frequencies.
2. Emission level (dBμV/m) = 20 log Emission level (μV/m).
3. As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

## 5.1.4 Test Results

### 5.1.4.1 Field Strength of Fundamental

Horizontal

Vertical

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission.

| <b>#27.28(QP)</b> | <b>/</b>               | <b>48.63</b>            | <b>49.50</b>    | <b>-0.87</b> | <b>-8.24</b>          | <b>Vertical</b> |
| 27.1098(PK)       | /                      | 45.95                   | 100.00          | -54.05       | -8.13                 | Horizontal      |
| 27.1098(PK)       | /                      | 63.09                   | 100.00          | -36.91       | -8.13                 | Vertical        |
| 27.1098(AV)       | /                      | 41.60                   | 80.00           | -38.40       | -4.35                 | Horizontal      |
| 27.1098(AV)       | /                      | 58.74                   | 80.00           | -21.26       | -4.35                 | Vertical        |

**Note:**

- 1.Emission Level = Read Level + Correction Factor
  - 2.Correction Factor = Antenna Factor + Cable Loss - Preamplifier Gain
  - 3.Margin = Emission Level -Limit Value
  4. The average value of fundamental frequency is: Average value = Peak value +AV factor, where the AV factor is calculated from following formula: AV factor=20 log (Duty cycle) = 20 log (60.59%) = -4.35dB, please see 5.1.4.2.
- #Marginal pass.

### 5.1.4.2 Calculation of Average Factor

The duration of one cycle = 19.41ms

Effective period of the cycle =1.59ms\*4 + 0.54ms\*10 =11.76ms

Duty Cycle =11.76ms / 19.41ms =60.59%

Averaging factor in dB = 20 log (duty cycle) =20 log (60.59%) = -4.35dB

## 5.2 20dB Bandwidth

For test instruments and accessories used see section 6

### 5.2.1 Test Procedures

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
3. Measure the frequency difference of two frequencies that were attenuated 20dB from the reference level. Record the frequency difference as the emission bandwidth.
4. Repeat above procedures until all frequencies measured were complete.

### 5.2.2 Test Setup

### 5.2.3 Test Limits

The field strength of any emissions appearing between the band edges and out of band shall be attenuated at least 20 dB below the level of the unmodulated carrier or to the general limits in Section 15.209

| Frequency (MHz) | Limits (MHz)       |
|-----------------|--------------------|
| 27.145          | Within 26.96-27.28 |

This report sets forth our findings solely with respect to the test samples identified herein. |----------------------|----------------------|----------------------|--------|
| 27.087               | 27.263               | 26.96 MHz -27.28 MHz | PASS   |

## 5.3 Conducted Emission (CE)

For test instruments and accessories used see section 6

### 5.3.1 Test Procedures

The PC Power connected to the power mains through a line impedance stabilization network (L.I.S.N.#2). This provides a 50 ohm coupling impedance for the EUT. Please refer the block diagram of the test setup and photographs. The other peripheral devices power cord connected to the power mains through a line impedance stabilization network (L.I.S.N.#1). Power on the PC and let it work normally, we use a keyboard test software, let EUT working in test mode, then test it. Both sides of AC line are checked to find out the maximum conducted emission. In order to find the maximum emission levels, the relative positions of equipment and all of the interface cables shall be changed according to FCC Part 15C on Conducted Emission Test.

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Disagreement against this test report, if any, should be filed with to our company in writing within 15 days of receiving the report. ## 5.4 Antenna Requirements

### 5.4.1 Test Standard:

FCC Part 15, Subpart C 15.203

### 5.4.2 Standard Requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user. but the use of a standard antenna jack or electrical connector is prohibited.

### 5.4.3 EUT Antenna:

The antenna is Wire Antenna and no consideration of replacement. The best case gain of the antenna is 0dBi. Antenna location: Refer to TORNADO STUNT R/C BLUE/ORG (050303).

This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted.
